## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to a process of making compound of formula I, classified in class 544, subclass 183 and other classes and subclasses depending upon the choice of heterocyclic or heteroaryl groups.
- II. Claim 11, drawn to a pharmaceutical composition of the compound of formula I and other anticancer or cytotoxic agents, classified in class 514, subclass 243 and other classes and subclasses depending upon the choice of heterocyclic or heteroaryl groups, as well as choice of the anticancer or cytotoxic agents for combination.
- III. Claims 12-16, drawn to several method of use of the compound of formula I, classified in class 514, subclass 24, and other subclasses depending upon the choice of heterocyclic or heteroaryl groups.

The inventions are distinct, each from the other because of the following reasons:

As per MPEP § 803, there are two criteria for a proper requirement for restriction between patentably distinct inventions:

- (A) The inventions must be independent or distinct as claimed and
- (B) There must be a serious burden on the examiner if restriction is required.

Invention I, II and III are independent and distinct from each other because they are directed to functionally different / dissimilar inventions. Group I relates to a process

Art Unit: 1624

of making a compound of formula I while Group II is combination pharmaceutical composition and Group III relates various method of use of compound of formula I. It should be clear that Group II and Group III dependent on process claim (which is improper) not a compound claim. Consequently, the groups have different classifications and require separate prior art searches. They can be made and used independently. Art which may render obvious or anticipate one of the groups would not necessarily do the same for the other group. Some references cited in the Information Disclosure Statement may anticipate one of the group but may not do the same for other groups embraced. Likewise a process for making the said compound even if it is known, it would not be relevant to the method of use claims. Each can support a patent, as the each group are capable of being utilized alone not in combination with other group.

In addition, it is necessary to classify and search all the controlling hetero cores and such a search of all controlling heterocores would serious search burden given the limited time available for each application.

In view of distinct nature of each of the invention, the restriction is set forth in writing.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1624

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
